

Contributions:

Maria Maynard:

- Signup screen with email sign up using firebase.
- Social media opt in screen with place holders for social media login.

Gabriela Pulido:

- Notification Hub table view with notification placeholders.
- Twitter Channel table view.
- Instagram Channel table view.
- LinkedIn Channel table view.
- Facebook Channel table view.

Ji-Young Seo:

- Splash screen
- Log in screen that authenticates using firebase.

Audrey Chung:

- Settings Screen with dummy data
- basic connections to the social media opt in screen and change password screen(blank placeholder)

Ji-Young Seo:

- Splash screen
- Log in screen that authenticates using firebase.
- Differences:

Differences:

- no dark mode. Implementing a side bar menu ended up being pretty tricky, so a lot of settings features were simplified.
- It's difficult to see the social media opt in view & the icon spacing is off. This is exclusively because of wip difficulties with the settings side bar. If accessed directly, it performs & looks exactly as intended!
- In our proposal we stated that there would be only an "admin login" in our alpha release. This was before we knew how to authenticate users using firebase, so we went ahead and set up a normal login system with no admin account.
